pfs: report

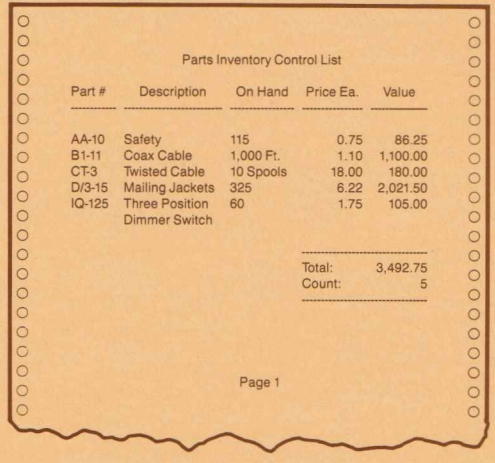
PFS:REPORT summarizes and helps you analyze the information you have stored with PFS:FILE so you make better decisions. In minutes, you can print reports to the screen or your printer that would take hours to produce manually.

PFS:REPORT produces tabular reports consisting of vertical columns from the item names in your PFS file. You can retrieve only the information you need from your PFS files and then have REPORT automatically sort your information alphabetically or numerically with totals, averages and counts. You can also specify additional calculations.

PFS:REPORT gives you:

- Automatic report title centering
- Alphabetical or numeric sorting
- Automatic decimal point alignment
- Calculated columns
- Automatic page numbering

PFS:REPORT — the easy-to-use, powerful complement to PFS:FILE.



Parts Inventory Control List
